How to maintain **Non-Structural Drainage Practices**

STORMWATER FACILITY MAINTENANCE PROGRAM

What are non-structural drainage practices?

Common non-structural drainage practices include directing rainwater (stormwater) from your roof gutters or driveways to nearby vegetated areas where it can soak into the ground.

Examples include:

- **Rooftop Disconnection:** Directing gutter downspouts to grass or planted areas
- **Non-Rooftop Disconnection:** Driveways or parking lots are sloped so that rainwater flows onto grass or planted areas
- **Sheetflow to Conservation Area:** Directing rainwater to natural planted areas

Non-structural drainage practices need simple maintenance to keep stormwater flowing into them, similar to other landscaped areas:

**Remove debris from
gutters and drainage paths.**

Splash blocks can minimize erosion. Be sure they are installed correctly so water drains away from the house.

Actions you can take

Do...

Seasonally

- ✓ Rake and remove leaves that block the flow of rainwater.
- ✓ Remove weeds and invasive plants.

As needed

- ✓ Remove sediment and debris from areas in and around water flow paths.
- ✓ Inspect your property after storms to make sure that rainwater properly reaches vegetated areas and soaks into the underlying soil.
- ✓ Observe the health and coverage of vegetation to determine whether any plants need to be pruned, trimmed, watered, or replaced.
- ✓ Repair and stabilize eroded areas.

**Who is
responsible
for this
maintenance?**

**As the property owner,
YOU are responsible
for all maintenance of
your non-structural
practice area.**

Don't...

- ✗ Don't direct rain water to other hard surfaces or areas of bare soil.
- ✗ Don't use fertilizer or pesticide.
- ✗ Don't place patios or sheds in a non-structural drainage area.

Direct rainwater to vegetated areas.

Can I remove the practice?

No, you cannot remove any practices that were part of your building installation—these are permitted practices and DEP maintains a database of these locations. DEP may perform a maintenance inspection of your practice if it is a permitted structure. Contact DEP to find out if you have a permitted practice or if you would like to discuss options for modifying your practice.

Troubleshooting

Symptom	Possible Cause	Solution
Standing water in the vegetated area	If standing water occurs for more than 48 hours, the area receiving runoff may be clogged or compacted.	The surface of the vegetated area may need to be tilled, regraded and replanted.
Erosion	The runoff is moving too fast and/or the vegetation has died.	Stabilize the soil by planting new vegetation. Use rocks or a splash block if needed to slow the water.

You can increase the success of your non-structural practices and save on maintenance costs by performing regular inspections and maintenance to ensure rainwater is soaking into the ground.

Keep the flow path clear in front of your downspout.

Remove leaves and debris from your gutters.

Recommended time frames for typical maintenance

	Jan	Feb	Mar	Apr	May	June	July	Aug	Sep	Oct	Nov	Dec
